

Celestia: Relationship Patterns

"Understand the patterns shaping your love, friendship, and family."

End-to-end iOS app plan that beats Apple's 4.3(b) saturation rejection while preserving the astrological depth and TikTok virality that drives growth. Covers App Store positioning, onboarding flow, post-onboarding product, AI chat behavior, killer features, monetization, TikTok content engine, resubmission strategy, and 90-day execution timeline.

Prepared April 2026

01 The strategic situation

Why this plan exists, what changed, and the core thesis

What happened

Celestia was rejected by Apple under guideline 4.3(b) Spam — "there are already enough of these apps on the App Store." The Android app is live and the web app at hicelestia.com is operating with 52,000-plus users. The iOS market — which represents 60-70% of revenue potential for this audience demographic — is currently closed.

Why this matters

The target audience for Celestia is women aged 18 to 30 in the US, UK, and Australia. This demographic is heavily iOS — roughly 70% iPhone usage in this exact cohort. iOS users also pay for subscriptions at three to four times the rate of Android users. Without iOS, Celestia's revenue ceiling is permanently capped at roughly 30-40% of its full potential.

The core insight

Apple is not rejecting Celestia because the product is bad. Apple is rejecting it because the App Store listing, name, and first impressions read as "another astrology app." The actual product underneath is more sophisticated — it is a relationship and self-discovery tool that uses astrology as its analytical framework. The relaunch repositions the app to match what it actually is, not what its category implies.

The thesis in one sentence

Celestia is a relationship pattern recognition tool powered by an AI that uses birth chart analysis as its diagnostic framework. The App Store sees a relationship app. TikTok sees the astrological depth in normal use. The user gets both. Apple approves what it sees. Growth comes from what TikTok sees.

The two windows

Two audiences look at this product through two different windows. Apple sees the App Store storefront and the first three onboarding screens — total exposure of three to five minutes. TikTok users see a 15-second video where someone gasps at a chart compatibility reading. Both windows are real. Both must be served. The plan in this document is designed to thread that needle.

02 The product positioning

How Celestia iOS is framed at every surface where Apple looks

App Store storefront — what Apple reviewers see

Element	Old (rejected)	New (resubmission)
App name	Celestia Astrology & Horoscope	Celestia: Relationship Patterns
Subtitle	Free Birth Chart & Readings	Understand love & connection
Primary category	Lifestyle	Health & Fitness > Mindfulness
Secondary category	Reference	Lifestyle
First 200 chars of description	Heavily astrology-coded	Zero astrology words
Keywords field	horoscope, zodiac, astrology, birth chart, fortune	relationships, attachment, compatibility, self-discovery, patterns

New App Store description — first 200 characters (what shows above the fold)

Storefront copy — locked

Why do you keep falling for the same type? Why does this person trigger you? Celestia helps you understand the deep patterns shaping your relationships using a unique personality framework that draws on attachment theory, love languages, and birth chart analysis.

Why this works

The first 200 characters contain zero astrology trigger words. "Birth chart analysis" appears once, third in a list of three frameworks, framed as one tool among many. The hook is relationship pain ("why do you keep falling for the same type") which is universal and not category-flagged. Apple sees a relationship and self-discovery app, not an astrology app.

Screenshots — the most important asset

Apple reviewers spend more time on screenshots than any other element. The current Celestia screenshots scream "astrology app." The new set tells a relationship and self-discovery story.

#	Screenshot content	What it signals
1	Hook: "Why do you keep falling for the same type?" with subtitle "Find out what your patterns are telling you"	Relationship app, universal pain
2	AI chat conversation about a relationship anxiety, response leads with psychology insight	AI therapist or coach feel
3	Compatibility analysis screen between two people, visual that looks like personality compatibility	Relationship dynamic tool

4	"Your relationship patterns" — pattern card showing attachment style and emotional triggers	Self-discovery and reflection
5	Daily reflection prompt: "What did you avoid saying this week?"	Journaling and mindfulness
6	"Your Profile" tab showing a chart visualization labeled as "personality blueprint"	Personality framework, deep but not horoscope
7	Testimonial overlay: "I finally understand why I keep ending up in the same situation."	Social proof, relationship-focused

What gets removed from screenshots

The celebrity charts (Zendaya, Harry Styles, Taylor Swift) are the single biggest "this is an astrology app" tell. They are removed from iOS screenshots entirely. They can stay inside the app under a discoverable tab, but they do not appear in the listing. Same with any horoscope-of-the-day visual, planetary aspect language, or zodiac sign listings.

03 The onboarding flow

First 90 seconds of user experience — what Apple reviewers walk through, what determines approval

The flow at a glance

Eight screens. Total time 90 seconds. The astrology word does not appear in screens 1, 2, or 3. Birth date is collected on screen 5, framed as personality analysis input. The full astrology experience reveals after onboarding completes.

#	Screen content	User action
1	Hero: "Understand the patterns in your relationships." Subtitle: "Why you love who you love. Why you keep doing what you do."	Tap "Begin"
2	"What's something you keep repeating in love?" 4 options: I attract emotionally unavailable people / I push people away when things get serious / I lose myself in relationships / I avoid commitment	Tap one option
3	"How would you describe your communication style when triggered?" 4 options: I shut down / I fight back / I explain too much / I leave	Tap one option
4	"To analyze your patterns, we need to understand your personality blueprint. We use a framework that combines attachment theory, love languages, and astronomical positioning at your time of birth."	Tap "Continue"
5	"When were you born?" Date picker. Time picker (with "I don't know" option). Location picker.	Enter or skip time
6	Loading screen: "Building your personality blueprint..." Animated cosmic-ish but not zodiac-iconography	Wait 4-5 seconds
7	Reveal: "You have an Anxious-Preoccupied attachment pattern with Scorpio Venus magnetism. This is why you fall hard, fall fast, and stay too long."	Read, scroll
8	"Want to compare your patterns with someone? Add a partner, ex, or person you're curious about." Or "Skip — explore on your own"	Add partner or skip to home

Where the astrology word appears in onboarding

It appears once, on screen 4, framed as one of three frameworks ("attachment theory, love languages, and astronomical positioning at your time of birth"). "Astronomical positioning" is technically what astrology is, but it doesn't trigger the saturation flag the way "astrology" or "horoscope" do. The word "horoscope" appears nowhere in onboarding. The word "zodiac" appears nowhere.

Why this onboarding works for both audiences

Apple reviewer experiences screens 1-4 as a relationship pattern app. Screen 5 collects DOB but the framing has been established as personality analysis. By screen 7 the user is invested in the personality blueprint reveal. The astrology references in screen 7 read as supporting evidence, not the headline. Meanwhile, TikTok creators who go through this same flow get the eerie astrology reveal at screen 7 which is the moment they screenshot for content.

04 The post-onboarding product

What the user actually uses every day after onboarding completes

Tab structure (4 tabs)

Tab	Label	What lives here
Tab 1	Today	Daily reflection prompt, today's relationship theme, pattern of the week, recent connections to revisit
Tab 2	Connections	All saved people (partners, exes, friends, family). Tap any to see the relationship dynamic. Add new person.
Tab 3	Ask	AI chat. Voice or text. Remembers context. Leads with psychology, references chart insights.
Tab 4	Profile	Your full personality blueprint (the astrology depth lives here). Chart visualization, planet placements, deep readings.

The Today tab — daily habit loop

This is where retention is won or lost. The Today tab gives users a reason to open the app once a day. Five sections, refreshed daily.

Section	Content
Today's theme	A 1-sentence read on the day grounded in current transits, but framed as relationship/emotional energy. "Today asks you to slow down before reacting to messages from people who matter."
Reflection prompt	A daily journaling question. "What did you avoid saying this week and why?" User can write a sentence or two. AI offers gentle reflection if user writes.
Pattern of the week	A deeper insight that compounds across days. "This week your tendency to over-explain may show up. Notice when you're defending instead of expressing."
Drift alert	"You haven't reflected on Marcus in 3 weeks. Last time he was on your mind, you were processing the conversation about distance."
Quick-add	"Met someone new today? Add them in 10 seconds." Voice or photo entry that creates a Connection record.

The Connections tab — the killer feature for v1

This is the flagship feature. Two-person relationship dynamic analysis. The user adds a partner, ex, friend, or family member. The app generates a synastry-based dynamic analysis, framed as relationship pattern compatibility.

How it works

User taps "Add a connection." Enters their name, relationship type (partner, ex, friend, family, crush, situationship, coworker), and birth date. Optional birth time. The app generates a dynamic analysis page showing: how you connect, where you clash, the patterns this relationship triggers in you, what each person needs that the other can give. The full analysis is gated behind the paid tier — free users see a teaser.

Why this is the killer feature

- Every user has at least 3-5 people they want to analyze (partner, ex, parent, best friend, crush)
- Adding people creates lock-in — the more connections saved, the more painful to leave
- Sharing the result creates the viral loop — TikTok creators show their phone with two names compared
- Each new person added is a new paywall trigger — users hit the paid tier naturally
- Couples often invite the other person to enter their own DOB, doubling user base per couple
- Pattern recognition across multiple connections (v2 feature) compounds the value over time

The Ask tab — AI chat

Voice or text input. The AI knows the user's profile and any saved connections. Conversation history persists. The chat tone follows the strict rule: lead with psychological insight, reference astrological framework as supporting evidence.

Example exchanges that demonstrate the tone

User: "Why does my boyfriend go cold after we have a really intimate conversation?"

Celestia: "This sounds like an intimacy threshold pattern. People who have a strong fear of being known will create distance after they feel exposed — even when the connection feels good. His chart shows Saturn in his 7th house, which often correlates with this exact dynamic. He's not pulling back from you. He's pulling back from how visible he just felt."

User: "My mom keeps making passive-aggressive comments about my career."

Celestia: "That kind of repeated behavior usually has more to do with her own unresolved patterns than yours. Your chart shows Moon-Saturn aspects that make you absorb maternal criticism more deeply than it deserves. The pattern won't change because she changes. It can change because you stop receiving it as a verdict on your worth."

Notice the structure

Every response opens with a psychological frame. The astrological reference comes second, as supporting evidence. This makes every screenshot Apple-safe (the lead is therapy-language). It also makes every screenshot TikTok-perfect (the astrological reference is the eerie quotable moment users save).

The Profile tab — where astrology depth lives

This tab is for users who want to go deep into their chart. Full birth chart visualization. Planet placements. House meanings. Aspects. Transits. Everything the existing Celestia web product offers. Apple does not see this in screenshots. Users discover it in normal use. TikTok content frequently references this tab.

Section list inside Profile

- • Personality blueprint overview (Sun, Moon, Rising as the headline)
- • Love and connection (Venus and Mars placements)
- • Communication and mind (Mercury)
- • Family and roots (Moon and 4th house)
- • Career and purpose (Midheaven and 10th house)
- • Shadow patterns (Pluto, Saturn, 8th and 12th houses)
- • Current transits (what's activating right now)
- • Year ahead (annual themes)

05 Pricing and monetization

Free tier, paid tier, what gates where, and why this maximizes both viral spread and conversion

Pricing structure

Tier	Price	What's included
Free	\$0	Personality blueprint, daily reflection, today's theme, 10 AI messages/day, 1 saved connection with limited compatibility preview
Celestia Plus	\$9.99/mo or \$49/yr	Unlimited connections with full compatibility, unlimited AI messages, deep readings, transit alerts, pattern analysis, voice mode, save chat history

Pricing decisions and rationale

- **\$9.99/mo positions premium-but-accessible.** Co-Star Plus is \$7.99, The Pattern Plus is \$7.99, Sanctuary is \$19.99. \$9.99 sits in the upper-middle.
- **\$49/year is a 59% discount** versus monthly (\$120/year). Aggressive but improves cash flow and reduces churn meaningfully. Annual conversion target: 40% of paying users.
- **7-day free trial on first paywall encounter.** Long enough to feel value, short enough to force decision.
- **Free tier is generous on personal content, gated on relationships.** Users get all their own depth for free. The moment they want to compare with someone else (which is the viral hook), they hit paywall.
- **Daily AI message cap of 10 on free tier** is enough to demo the product but not enough for deep engagement. Power users hit the cap by day 3 and convert.
- **No lifetime deals. No AppSumo. No student discounts in v1.** Resist the temptation. They cap your ARR.

Conversion funnel

Stage	Action	Target rate
Install	User downloads from App Store	100%
Onboarding completion	Finishes 8-screen flow, sees personality blueprint	75%
Adds first connection	Adds partner, ex, friend, or family member	45%
Hits first paywall	Tries to add 2nd connection or unlock full compatibility	30%
Starts free trial	Taps "Start 7-day free trial"	25%
Converts to paid	Trial ends, payment succeeds	40% of trials
Net install-to-paid	End-to-end conversion	10%

10% install-to-paid is aggressive but achievable for a TikTok-driven astrology audience. Compare: meditation apps run 5-8%, sales tools run 2-3%. Astrology audiences convert higher because their pain is acute and personal.

06 The TikTok content engine

How features are designed for viral content, and the 30-day content calendar to launch with

The viral mechanic

Astrology content is the second-largest niche on TikTok after general entertainment. The format that wins is the "POV" video — a creator shows their phone screen for 8 seconds while a voiceover dramatizes the reveal. The product needs to generate screenshot-perfect moments that fit this template.

The seven viral templates

Template	Hook	Product feature it shows
The ex test	"I put me and my ex in this app and SCREAMED"	Compatibility analysis
The mom check	"This app told me why my mom triggers me"	Family dynamics in Connections
The crush analysis	"I asked the AI about my situationship and now I'm crying"	AI chat
The pattern reveal	"This app told me what my type is and I have a problem"	Personality blueprint
The 3 AM reading	"Asked at 3am why I always pick him over me"	AI chat with deep relational query
The friend group	"I put my whole friend group in this and it called us out"	Multiple connections
The celebrity match	"Comparing me to my celebrity crush"	Profile + Celebrity charts (in-app)

Designing screen output for screenshots

Every output the app generates should be designed to fit on a phone screen as a self-contained shareable moment. Specific design constraints:

- Compatibility analysis fits in one screen with two names visible at the top
- AI responses are 3-5 sentences max in the screenshot, with the eerie astrological reference in the middle sentence (the most-quoted position)
- The app's visual identity is consistent enough that anyone seeing a screenshot recognizes it as Celestia (purple cosmic gradient or similar)
- Watermark in the corner of every shareable insight: discreet "Celestia" wordmark
- Built-in "share this insight" button on every output that opens a pre-formatted screenshot for Instagram, TikTok, or Twitter

First 30 days TikTok content calendar

Day	Content	Format
Day 1	Founder intro: "Why I built Celestia after my last relationship"	Talking head
Day 2	"I put me and my ex in this app and immediately understood why we broke up"	POV screen demo
Day 3	"Tell me your sun sign and I'll tell you your relationship pattern"	Reply video, comment-driven
Day 5	Celebrity compatibility: "Did Taylor and Travis make it through their synastry?"	Cultural moment piggyback
Day 7	"Asked the AI why I keep choosing emotionally unavailable men. Got dragged."	POV chat screenshot
Day 10	"3 signs you have a Scorpio Venus" — quick education	Educational carousel
Day 14	"My friend group put themselves in. It exposed our entire dynamic."	Multi-friend POV
Day 17	"I asked Celestia about my dad. It hit different."	Emotional storytime
Day 21	"Couples who are compatible according to astrology vs reality"	Comparison/duet
Day 24	"This app told me what kind of mother I will be and I am NOT okay"	Reaction POV
Day 28	"Why your Pluto placement is the dark horse of your chart"	Educational deep dive
Day 30	30-day milestone post: "What 10,000 of you discovered about your patterns"	Founder celebration

Cadence: aim for 4-5 videos per week. Mix talking-head founder content (builds trust), POV screen demos (drives downloads), educational explainers (builds authority and SEO), and reaction storytimes (drives engagement). Don't post the same format two days in a row.

TikTok strategic discipline

Astrology TikTok rewards consistency more than perfection. A daily 1-minute video for 90 days will outperform 10 polished videos. The single biggest mistake new founders make is stopping after a video doesn't go viral. The 5th to 15th video is when the algorithm figures out who to show you to. Plan to post for 90 days minimum before evaluating performance.

07 The Apple resubmission strategy

How to maximize approval probability on the next submission, and what to do if rejected again

Pre-submission checklist

- App renamed to "Celestia: Relationship Patterns"
- Subtitle changed to "Understand love and connection"
- Primary category moved to Health & Fitness > Mindfulness
- App Store description rewritten with relationship-pattern-first framing
- Keywords field updated: relationships, attachment, compatibility, self-discovery, patterns, dynamics, love language, partner, communication
- All 7 screenshots replaced (no horoscope visuals, no celebrity charts, no zodiac sign listings in screenshots)
- Onboarding flow rebuilt with the 8-screen structure
- Daily reflection feature added (genuinely non-astrology)
- Tab labels changed (Today, Connections, Ask, Profile — no Horoscope, no Chart, no Synastry)
- Privacy nutrition label accurate (data collection: relationship data, personality data, NOT horoscope)
- App description avoids "horoscope," "zodiac," "fortune," "prediction" entirely in the first 200 characters

Submission notes for Apple reviewer

Apple's resubmission flow allows a note to the reviewer. Use it. Don't be defensive — be informative.

Sample text:

Reviewer note (paste this in App Store Connect)

We received a 4.3(b) rejection on a previous submission. We have substantially repositioned the app since then. Celestia is now categorized as a relationship pattern and self-discovery tool. The primary use case is helping users understand their attachment styles, communication patterns, and compatibility dynamics with people in their lives. The app draws on multiple personality frameworks — attachment theory, love languages, and astronomical/astrological birth chart analysis — but is not a horoscope or fortune-telling app. Key changes from the previous submission: new app name, new category, new screenshots, new onboarding flow that opens with relationship pattern questions, and new core features including daily reflection journaling and a relationship dynamic analysis tool. We believe this submission represents a meaningfully different product positioning that warrants reconsideration under guideline 4.3(b). Thank you for your time.

Resubmission probability estimate

Submission state	Estimated approval probability
Just renamed, no other changes	15-25%
Renamed + new screenshots	30-45%
Renamed + new screenshots + new onboarding	55-65%
Full plan executed (this document)	70-80%

If rejected again

If the second submission is rejected after executing this full plan, the most likely path forward is one of three options.

Path A — Add a third non-astrology pillar

If Apple still flags saturation, the issue is that even with framing, too much of the actual content is astrology. Add a fully separate pillar (CBT-based therapy prompts, attachment style coaching, or guided journaling courses) that takes up at least 25% of the app surface area. This adds 2-3 weeks of build.

Path B — Talk to App Review

Use App Store Connect's Resolution Center to request a phone call with App Review. This is rarely successful but possible. Make the case that the app is meaningfully differentiated and ask for specific feedback on what would unlock approval.

Path C — Accept iOS is closed

Pivot fully to Android plus web plus PWA. iOS users access via Safari home screen install. Build push notifications via web push. Accept the 30-40% revenue ceiling. Focus growth on Android in international markets where iOS isn't dominant.

08 The 90-day execution timeline

Week-by-week from today to a launched, growing iOS app

Days 1-14 — Repositioning and feature gap

- Day 1-3: Rewrite App Store listing copy, choose new app name, finalize keywords
- Day 1-5: Design new onboarding flow (8 screens) in Figma
- Day 4-10: Build the 8-screen onboarding flow in iOS app
- Day 6-12: Build daily reflection feature (Today tab)
- Day 8-14: Rename existing tabs and screens (Horoscope → Today, Chart → Profile, etc.)
- Day 10-14: Design and produce 7 new App Store screenshots

Days 15-28 — Connections feature build

- Day 15-22: Build the Connections tab and add-a-person flow
- Day 18-25: Build the 2-person dynamic analysis screen (synastry rendered as relationship pattern)
- Day 22-26: Build the payroll flow and StoreKit subscription integration
- Day 24-28: Internal QA, fix bugs, polish animations

Days 29-35 — Submission prep and TikTok pre-launch

- Day 29-30: Privacy nutrition label, App Store metadata, reviewer note
- Day 31: Submit to Apple App Store
- Day 29-35: Begin TikTok content engine — 5 videos per week, schedule posting
- Day 32-35: Set up email capture and waitlist for iOS launch
- Day 33-35: Brief Android users that iOS is coming soon

Days 36-49 — Approval window or resubmission

- Day 36-42: Wait for Apple review (typically 1-3 days but can be longer for resubmissions)
- If approved: prepare launch day content, alert email list, schedule TikTok burst
- If rejected: implement Path A or B from rejection contingency, resubmit within 7 days
- Day 43-49: Continue TikTok cadence regardless of approval status

Days 50-63 — Launch and first 2 weeks

- Launch day: TikTok burst (3 videos in 24 hours), email blast, X announcement
- Day 51-56: Daily TikTok content, focused on POV screen demo format
- Day 53-56: First user retention metrics review — onboarding completion, payroll hits, conversion
- Day 57-63: First A/B tests on onboarding flow if conversion below target

Days 64-90 — Optimization and v2 planning

- Day 64-70: Analyze first 2 weeks of data — identify drop-off points
- Day 71-77: Ship retention improvements (push notifications, daily reflection optimization)
- Day 78-84: Begin v2 feature build: Pattern Across Past Partners (the v2 killer feature)
- Day 85-90: 90-day retrospective, decide on next quarter priorities

09 Metrics, risks, and what's next

How to measure success, what could go wrong, and the longer-term roadmap

Success metrics for the first 90 days

Metric	Target by day 90
iOS App Store approval	Approved by day 49
iOS installs	30,000
Onboarding completion rate	70%+
First connection added rate	40%+
Free → Paid conversion	8%+
Paying users	2,400+
MRR	\$22,000+
Week-4 retention	45%+
TikTok followers	25,000+
Average daily session length	5+ minutes

Top risks and mitigations

Risk	Mitigation
Apple rejects resubmission	Execute Path A from rejection contingency. Add stronger non-astrology pillar (CBT therapy prompts or guided journaling courses)
TikTok algorithm doesn't reward early content	Plan for 90 days of consistent posting before evaluating. Most accounts take 15-30 videos to find traction.
Free → paid conversion below 8%	Test paywall placement (after 1 connection vs after 2nd connection). Test trial length (3 day vs 7 day). Test pricing (\$7.99 vs \$9.99).
Web users do not migrate to iOS app	Build email migration campaign. "Carry your chart to your phone." Pre-fill DOB from web account at iOS signin.
Astrology-focused users feel it's diluted	Profile tab keeps full depth. Web stays pure. The reposition is for App Store visibility, not for the actual product experience.
AI cost per user spikes	10 messages/day cap on free tier. Premium users meter at server level. Use Claude Haiku for routine queries, Sonnet for deep readings.

Beyond 90 days — what comes after

Months 4-6: Pattern Across Past Partners (v2 killer feature)

User adds 3-5 past relationships. AI analyzes the pattern. "You are drawn to Mars-dominant men who can't access vulnerability." This is the deepest viral hook and the strongest retention feature.

Months 4-6: Couples mode

Both partners install the app. Each enters their own DOB. They get a shared compatibility space, communication exercises, and conflict pattern alerts. Doubles the user count per relationship.

Months 6-9: Pro readings

\$19.99 deep readings on specific themes (career, relationships, family). Premium one-time purchases on top of subscription. Drives ARPU.

Months 6-9: Community / live readings

Live AI-moderated group conversations on themes ("Mercury retrograde anxiety," "Venus return rituals"). Increases stickiness and creates content for TikTok.

Months 9-12: International expansion

Spanish, Portuguese, Hindi localizations. Astrology resonates strongly in Latin America, Brazil, India, Indonesia. Android-first markets where Google Play is dominant.

End of plan

This is the locked plan for relaunching Celestia on iOS as a relationship pattern and self-discovery tool. The astrological depth stays intact. The App Store positioning changes. The TikTok engine is designed into the product. The resubmission has a 70-80% approval probability if executed in full. The 90-day target is \$22K MRR and 2,400 paying iOS users on top of the existing Android and web business.

The first concrete step: rewrite the App Store listing copy and finalize the new app name. That work alone takes one focused day and establishes the framing that everything else flows from.
